

Researchers find security holes in NYT, YouTube, ING, MetaFilter sites

Attackers could have used vulnerabilities on several Web sites to compromise people's accounts, allowing them to steal money, harvest e-mail addresses, or pose as others online.

by **Elinor Mills**  @elinormills / October 2, 2008 1:02 PM PDT / Updated: October 2, 2008 2:31 PM PDT

The vulnerability arises from a coding flaw that could allow someone to do a cross-site request forgery (CSRF) attack in which a "malicious Web site causes a user's Web browser to perform an unwanted action on a trusted site," according to the report.

Yahoo Mail hijacking exploit selling for \$700

XSS vulnerability allows attacks to steal and replace tracking cookies, as well as read and send e-mail from a victim's account.
